- a. 4" x 5" A-STYLE ELBOW
- b. 4" x 5" B-STYLE ELBOW

USES:

Create an extension from the downspout either straight back to the wall as you look at the downspout (A-style) or to the left or right of the downspout (B-style).

FEATURES:

Wilco elbows are longer than many other elbows to prevent downspouts from becoming clogged with debris and are made of thicker .027 gauge aluminum to prevent metal from cracking. They're also crimped on the sides (rather than corners) making it possible to conceal cross-overs under the soffit and avoid unsightly dimples. Elbows come in white and brown but may be special-ordered in other colors.

- a. 4" x 5" DOWNSPOUT
- b. 4" x 5" OUTLET

USES:

4 x 5 inch Downspout:

A vertical pipe that carries water from the gutter to the ground.

4 x 5 inch Outlet:

Connects downspout to gutter.

FEATURES:

Our .027 gauge aluminum downspouts are available in low-gloss white and royal brown 10-foot sections. These true rectangular downspouts with corner crimping are inspected for tight seams, straightness, and absence of dents and marks.

Less expensive product is almost always thinner gauge aluminum, which can mean inconsistent shape, denting and splitting.

a. 8 INCH GUTTER
b. 8 INCH HANGER

USES:

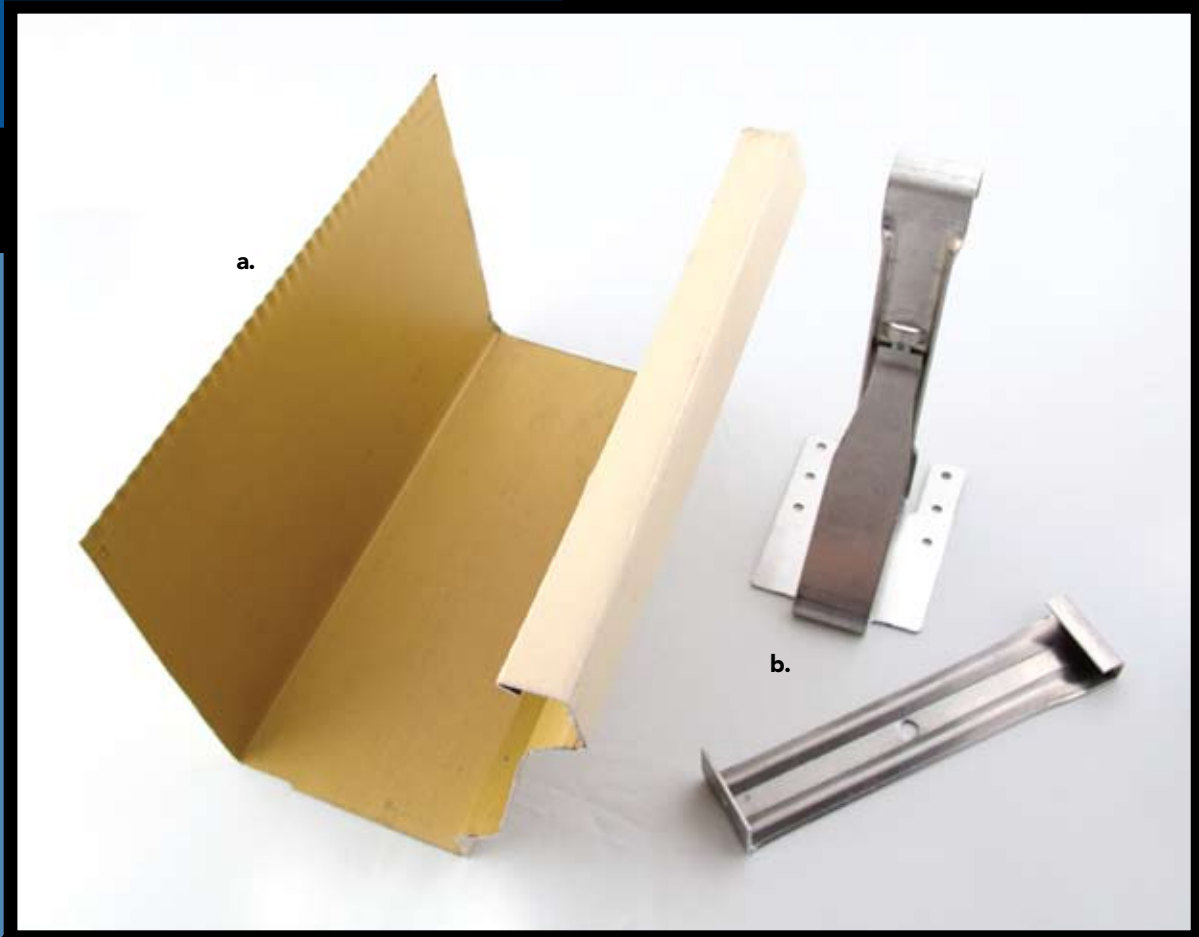

Gutter is installed at the bottom edge of a building's roof slope to collect water and channel it away from and down a structure (via downspouts).

Gutter Hangers secure gutter to fascia (does not need to be nailed or screwed to sheathing before roof is shingled).

FEATURES:

Gutter: Available in .040 gauge aluminum, low-gloss white and royal brown, and 10 and 20 foot lengths. Other colors are available by special order.

Gutter Hangers: Made from .080 aluminum.
